Abstract. This article provides a comparative analysis of health care systems from an economic perspective. It examines the efficiency, accessibility, and cost-effectiveness of different health care models across the globe. The study evaluates how economic factors influence health care policies and outcomes, offering insights into best practices for achieving optimal health care delivery. By analyzing various case studies, the article highlights the challenges and opportunities in reforming health care systems to meet economic demands.

Keywords: Health Care Economics, Comparative Analysis, Efficiency, Accessibility, Cost-Effectiveness

Introduction

Health care systems worldwide face the challenge of balancing efficiency, accessibility, and cost-effectiveness. This article analyzes different health care models from an economic perspective, comparing how various countries manage these critical aspects. It explores how economic factors shape health care policies and the outcomes they produce. The article examines case studies to identify effective strategies for reforming health care systems to better meet economic and health demands. By providing a comprehensive analysis, this study aims to offer a deeper understanding of the economic underpinnings of health care systems and guide policymakers in implementing effective reforms.
