Abstract. This study examines the changing gender dynamics within post-industrial societies, focusing on shifts in labor market participation, domestic roles, and power structures. Through comparative analysis of data from various developed nations, the paper highlights significant trends and explores the implications for gender equality and social policy. The research aims to contribute to the ongoing discourse on gender roles by providing fresh insights from the sociological perspective.

Keywords: gender, society, roles, equality, policy

Introduction: The transition to post-industrial societies has brought about significant changes in gender roles and dynamics. This paper explores these shifts by focusing on labor market participation, domestic responsibilities, and power structures within various developed nations. As traditional gender roles evolve, the implications for social policy and gender equality are profound, necessitating a careful examination of current trends. The research employs a comparative approach, analyzing data across different contexts to uncover both common patterns and unique variances in gender dynamics. By providing fresh insights from a sociological perspective, this study aims to enrich the discourse on gender equality and inform policy decisions.
