Abstract. This study explores how social media platforms influence political participation and engagement among diverse demographic groups. By examining user behavior across different platforms, the research identifies patterns that contribute to increased civic engagement and political activism. Through comprehensive data analysis, the study highlights the potential of social media as both a tool for political mobilization and a medium for perpetuating political polarization. This dual nature calls for tailored policy interventions to maximize positive outcomes and mitigate negative impacts on democratic processes.

Keywords: social, media, political, engagement, participation

Introduction: The advent of social media has transformed political participation, enabling unprecedented levels of engagement and interaction between citizens and political entities. These platforms serve as crucial arenas for public discourse, offering opportunities for political mobilization and activism. However, the impact of social media on political participation is complex, with potential benefits and drawbacks that warrant careful consideration. This research focuses on unraveling these dynamics by analyzing user interactions and engagement trends across multiple social media platforms. Our goal is to better understand how these digital tools shape political behaviors and democratic processes, offering insights for policymakers and stakeholders. [This is a preliminary version.
