Abstract. This article explores the factors driving urban migration in contemporary societies, focusing on economic, social, and environmental influences. By examining case studies from various countries, the study highlights the push and pull factors that compel individuals to move from rural to urban areas. It also assesses the impact of such migration on both the origin and destination locations. The findings suggest a complex interplay of factors that necessitates a multidisciplinary approach for effective policy formulation.

Keywords: Urban migration, Economic factors, Social networks, Environmental impact, Policy formulation

Introduction

Urban migration has become a defining feature of modern societies, with significant implications for both urban and rural areas. This paper investigates the various factors that drive individuals to migrate from rural to urban settings, including economic opportunities, social networks, and environmental changes. Through a series of case studies, the research highlights the diverse experiences of migrants and the multifaceted nature of migration. The study emphasizes the need for comprehensive policies that address the root causes of migration and support sustainable urban development.
